

Project Gate 1

At gate 1, the truck and visitors' entrance, a complete renovation and refurbishment of the entire infrastructure is scheduled. The implementation of this major project will start in the middle of this month and will be carried out in three phases.

The end of the entire project is planned for April 2023, during which we will inform you in time about the different phases.

In order to ensure that Evonik remains accessible, and that we can ensure safety at the Tijmsmanstunnel West, the following schedule has been set up.

Adjusted traffic situation at the Tijmsmanstunnel West during the entire period of the project from 17-10-2022 to 04-2023 (see also attached plan):

- For the sake of traffic flow, safety and project site traffic, it has been decided to set up the Tijmsmanstunnel West as a one-way street at gate 1 during the entire duration of the project. The situation is identical to the period during the works on the Scheldelaan last year.
- In this way, the oncoming traffic can be split into a left lane for visitor, truck and project site traffic. The right lane is provided for all traffic to gate 2, staff and contractor parking, I-bus as well as for through traffic around the Tijmsmanstunnel.

Phase 1, the part of the truck entrance on the inside of the Evonik site will be adjusted. (10/2022 until 06/12/2022)

These works take place within the fence of Evonik Antwerp. The entrance and the parking spaces for freight traffic are not yet affected during this phase. We will communicate further phases and possible impact on the handling at gate 1 at a later date.

TS-ANT-Bouwtechniek

The scope of the project is considerable. The end result is a completely new access at gate 1, through which the freight, visitor and contractor traffic will enter and exit via a completely renewed infrastructure.
